

## PURCHASING POLICY

At Residence ANA, we appreciate local and Slovenian producers, growers and service providers. We are aware that by purchasing local products and services, we contribute to the well-being of the local community.

Residence ANA is small as it has only two apartments with twelve beds. In line with our ecological orientation, we decided to have the laundry cleaned by a specialised company, while we do all the other work ourselves. We purchase the cleaning agents and cleaning aids, and waste sorting bags.

When buying products, we give preference to products which are packaged in such a way that less waste packaging remains and which are environmentally responsible.

When replacing or purchasing new devices, we, in addition to that above, also take into account energy efficiency. We opt for devices that belong to the energy class A+++.
